ADVANCE FACT SHEET

EXHIBITION:  BEFORE PHOTOGRAPHY: PAINTING AND THE INVENTION OF PHOTOGRAPHY

DATES:      The Museum of Modern Art, New York
           May 9 - July 5, 1981

SPONSOR:    This exhibition has been organized with the aid of
            a grant from the National Endowment for the Arts.

DIRECTOR:   Peter Galassi, Associate Curator in the Museum's
            Department of Photography

CONTENTS:   This exhibition proposes that the invention of
            photography was not simply a scientific or technical
            achievement, but a product of artistic tradition as
            well. To support this proposition, the exhibition
            includes approximately 40 paintings and drawings,
            made in the half-century before the invention of
            photography was announced in 1839. It also includes
            a comparable number of early photographs.

            The paintings and drawings, mostly landscapes and
            views of architecture, are by such painters as
            Constable and Corot and by some of their talented
            but less well-known contemporaries. The works rep-
            resent the emergence of a fundamentally modern artistic
            outlook that had begun to value individual, contingent
            perceptions of the world over publicly sanctioned ex-
            pressions of universal truths. With this outlook came
            a new sense of pictorial syntax, in which a picture
            was conceived not as a deliberately composed whole but
            as a telling fragment of a continuous and variable
            visual field. Mr. Galassi contends that the medium of
            photography, which can select but not compose, was born
            of this crucial transformation in artistic value and
            pictorial strategy. The photographic section of the
            exhibition represents the considerable artistic capital
            that the best early photographers made of the new
            strategy, which painters had long been inventing and
            photographers could not avoid.

continued/
With one exception, the paintings and drawings are borrowed from European collections. They represent an important aspect of the development of modern art, which only recently has received serious study. Most of the works have never been seen before in the United States. The photographs, drawn from the Museum's Collection and other public and private collections, present the work of outstanding early photographers, such as Roger Fenton, Henri Le Secq, and Timothy O'Sullivan.

**PUBLICATION:**
Before Photography: Painting and the Invention of Photography by Peter Galassi, Associate Curator in the Department of Photography, contains an introductory essay and 80 single-page plates of works in the exhibition, eight of them in color. The 156-page book will also contain a catalogue entry for each work, and an extensive bibliography. Published by The Museum of Modern Art, the book will be distributed by The New York Graphic Society, and will be available in the Museum stores in May. Clothbound, $22.50; paperbound, $12.50.

**PRESS PREVIEW:**
Wednesday, May 6, 1981, 10:00 A.M. - 1:00 P.M.

**PUBLIC OPENING:**
Saturday, May 9, 1981
